

ORYX — Vercel Deployment & Transfer Guide

Secure Zero-Code-Exposure Deployment, Project Transfer & Auto-Update Architecture

[SOP GUIDE](#)

 **IP & Source Code Protection Guarantee:** By following this procedure, the client gains full ownership of the live hosting, domains, and Vercel billing, while your GitHub repository remains 100% private. The client **cannot** download, view, or export your source code.

1 Phase 1: Initial Deployment in Company Vercel Account

- Log into your company Vercel account at **vercel.com**.
- Click **"Add New" > "Project"** and select your private GitHub repository **UNITY-11/oryx**.

App 1: Customer Portal (apps/web)

- **Project Name:** oryx-web
- **Framework:** Next.js
- **Root Directory:** Click Edit > Select apps/web
- **Environment Variables:**

```
NEXT_PUBLIC_SANITY_PROJECT_ID=...  
NEXT_PUBLIC_SANITY_DATASET=production  
SANITY_API_TOKEN=...  
ADMIN_WHATSAPP_FALLBACK=974XXXXXXX
```

- Click **Deploy** and verify build succeeds.

App 2: Admin Portal (apps/admin)

- **Project Name:** oryx-admin
- **Framework:** Next.js
- **Root Directory:** Click Edit > Select apps/admin
- **Environment Variables:**

```
NEXT_PUBLIC_SANITY_PROJECT_ID=...  
NEXT_PUBLIC_SANITY_DATASET=production  
SANITY_API_TOKEN=...  
ADMIN_SESSION_SECRET=long_random_key SMTP_USER=... &  
SMTP_PASS=...
```

- Click **Deploy** and verify build succeeds.

2 Phase 2: Project Transfer to Client Vercel Account

- **Client Setup:** Have the client create an account on **vercel.com** using their official company email (e.g. admin@oryxbeauty.qa).
- Get their **Vercel Username** or **Team Slug** (e.g., oryx-beauty).
- **Transfer Customer Web Project:**
In your Vercel dashboard > Open oryx-web > Go to **Settings > General** > Scroll to bottom > Click **"Transfer Project"** > Enter client's username > Confirm.
- **Transfer Admin Project:**
Open oryx-admin > Go to **Settings > General** > Click **"Transfer Project"** > Enter client's username > Confirm.
- Have the client log into their Vercel dashboard and click **"Accept Transfer"** (if prompted).

3 Phase 3: Domain Mapping & DNS Configuration

Inside the transferred Vercel projects (now in the client's account), configure their custom domains:

Project	Domain to Add	DNS Record to Configure in Domain Registrar
oryx-web	oryxbeauty.qa & www.oryxbeauty.qa	A Record: @ → 76.76.21.21 CNAME: www → cname.vercel-dns.com
oryx-admin	admin.oryxbeauty.qa	CNAME: admin → cname.vercel-dns.com

* Vercel automatically provisions and renews SSL certificates (HTTPS) within 5–10 minutes of DNS propagation.

4 Phase 4: How Automatic Future Updates Work

The Continuous Deployment Workflow:

```
[ Your Local Computer ] ↓ (git push origin main) [ UNITY-11/oryx Private GitHub Repo ] ↓ (Webhook Trigger) [ Client's Transferred Vercel Project ] → Builds and goes live in ~90 seconds!
```

→ Whenever you develop a new feature or fix a bug on your machine, simply push to Git:

```
git add . git commit -m "feat: enhance booking wizard" git push origin main
```

- Vercel automatically triggers a zero-downtime production deployment on the client's domain.
- You never need manual upload or server FTP.
- The client never gets access to view or download the code.

5 Phase 5: Final Security & Protection Verification

Security Item	Verification Method	Status
Private GitHub Repository	Check repo visibility on GitHub → ensure it is set to Private .	VERIFIED
No Collaborator Invites	Confirm client's GitHub accounts are not invited as repo members.	PROTECTED
Vercel Repo Link Behavior	Clicking repository link in client's Vercel UI leads to GitHub 404 access denied.	CONFIRMED
Environment Variable Encryption	Secrets (Sanity write tokens, SMTP passwords) are stored encrypted in Vercel.	SECURE
